## What is BrightBytes' Learning Outcomes?

BrightBytes' Learning Outcomes is monitoring student activity on educational applications to better understand the effectiveness of each platform by tying student usage data to achievement outcomes.

Teacher Requirements—None

We just want you to know about it for when you start seeing the pop-up message appear on student computers! It's not a scam!

School Impact – Low Risk/High Reward

Student daily computer usage would not be impacted other than a one-time pop-up message informing them to sign-in with Office 365 when visiting an education website. For example, if a student goes to KhanAcademy.com on a district device, a Learning Outcomes pop-up will appear and use their district log-in information to sign-in (see screenshot below). The plug-in will be installed across the district on a rolling basis in April. Installation is managed by the IT department.

BrightBytes sounds familiar…Have I heard this name before? Yes!

BrightBytes also delivers the district risk prediction and intervention management tool that our schools are loving! If you haven't checked it out, what are you waiting for? Questions about BrightBytes go to daim@scsk12.org.

Have any issues or concerns with Learning Outcomes?
