

## **Ed-Fi Early Warning System Quick Start Guide**

## Log into:

https://dw.scsk12.org/EdFiDashboard/

The Early Warning System is a tool that assists educators in identifying students that are at risk of not graduating on time. Each student has an overall prediction of not graduating on time (from 0-100%) if he/she remains on the current path. There are also individual indicators included in the system that help users to actually address the issues that students are having. These indicators have been assigned risk thresholds, enabling users to group students into Low Risk, Moderate Risk, and High Risk groupings. Similar to all metrics in the Ed-Fi Dashboards, the student level metrics are aggregated to the school and district level.

At the student level, the user can view a student's overall prediction of risk of not graduating on time along with a visual description of the approximate weights of risk factors in determining graduation risk.

The student level risk factors are actionable indicators that enable users to intervene and improve students' chances of graduation.

At the school level there are data filters that allow for filtering of data displayed on the page by ELL, SPED, Sect 504, Male or Female.

More buttons — enable users to drilldown into the metric data through a Grade Level Chart, a Historical Graph, a Student Distribution Graph, or a Student List.
