

Lesson 14

Multiply Fractions Using an Area Model

Name: \_\_\_\_\_

Prerequisite: Model Fraction Multiplication

Study the example problem showing a model of multiplying a fraction by a fraction. Then solve problems 1–7.

Example

What is  $\frac{3}{4} \times \frac{1}{3}$ ?

The number line is divided into thirds. Each third is divided into fourths. Each of these parts is  $\frac{1}{12}$  of the whole.

$\frac{3}{4}$  of 1 third is shaded. The whole is divided into twelfths, with 3 twelfths shaded. So,  $\frac{3}{4} \times \frac{1}{3} = \frac{3}{12}$ .

**B 1** Why is the shaded rectangle above the number line in the example divided into 3 parts?  
**Answers will vary. Possible answer:** You are finding  $\frac{3}{4}$  of  $\frac{1}{3}$ , so  $\frac{1}{3}$  is divided into 4 parts and 3 of those parts are shaded.

**M 2** How would the model in the example change if the problem was  $\frac{3}{4} \times \frac{2}{3}$ ?  
**Answers will vary. Possible answer:** One more shaded rectangle divided into 3 parts would be shown, showing  $\frac{3}{4}$  of another third.

**M 3** What is  $\frac{3}{4} \times \frac{2}{3}$ ? Use the number line to the right to model your answer.  
 $\frac{3}{4} \times \frac{2}{3} = \frac{6}{12}$

Solve.

**B 4** Look at the model and answer the following questions.  
 Each column is what fraction of the whole?  $\frac{1}{3}$   
 Each row is what fraction of the whole?  $\frac{1}{4}$   
 How many parts are in the whole? **12**

The dark gray parts show  $\frac{3}{4}$  of  $\frac{1}{3}$ . What fraction of the whole is  $\frac{3}{4} \times \frac{1}{3}$ ?  $\frac{3}{12}$   
 What is the product of  $\frac{3}{4} \times \frac{1}{3}$ ?  $\frac{3}{12}$

**M 5** Shade and label the model to show  $\frac{3}{4} \times \frac{2}{3}$ . Complete the equation.  
 $\frac{3}{4} \times \frac{2}{3} = \frac{6}{12}$

**C 6**  $\frac{6}{12}$  is equal to  $\frac{1}{2}$ . How does the model you shaded in problem 6 show that?  
**Answers will vary. Possible answer:** 6 of the 12 equal parts of the model have dark shading and the same number, 6, do not. So, the parts with the dark shading are half of the whole.

**M 7** Write a fraction from the box to complete the expression. Then complete the model to show the problem.  
**Possible answer shown.**

$\frac{1}{4} \times \frac{1}{5}$

Key

**B** Basic    **M** Medium    **C** Challenge

Lesson 14

Name: \_\_\_\_\_

Multiply Unit Fractions to Find Areas

Study the example problem showing multiplying unit fractions to find area. Then solve problems 1–5.

Example

Cardboard that measures 1 meter on each side is cut into cards that are  $\frac{1}{10}$ -meter wide and  $\frac{1}{2}$ -meter long. What is the area of each card?

You can model the problem with a picture:

You can model the problem with an equation.  
area =  $\frac{1}{2} \times \frac{1}{10} = \frac{1 \times 1}{2 \times 10} = \frac{1}{20}$  square meter

- M 1** Suppose the length of each card in the example problem is shortened to  $\frac{1}{4}$  meter. Will the area of each card now be greater or less than  $\frac{1}{20}$  square meter? Explain.

**The area of each card will be less than  $\frac{1}{20}$  square meter; Possible explanation: There will be 4 cards in each row. Each card will cover less space, so its area will be less.**

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

- B 2** Which expression represents the area of a card described in problem 1?

- A  $\frac{1}{2} \times \frac{1}{4}$       C  $\frac{1}{4} \times \frac{1}{10}$   
B  $\frac{1}{2} \times \frac{1}{10}$       D  $\frac{1}{4} \times \frac{1}{20}$

Solve.

- M 3** What is the area of a card that is  $\frac{1}{10}$ -meter wide and  $\frac{1}{4}$ -meter long?

**Show your work.**

**Students may model  $\frac{1}{4} \times \frac{1}{10}$  with an area model, an equation, or both.**

**Solution:**  $\frac{1}{40}$  square meter

- M 4** Mr. Von's 5th-grade class is going on a field trip. Each student is given a name card to wear that is  $\frac{1}{4}$ -foot wide and  $\frac{1}{3}$ -foot long.

Shade the model to find the area of each name card. Complete the equation.

$\frac{1}{4}$ -foot  $\times$   $\frac{1}{3}$ -foot =  $\frac{1}{12}$  square foot

- C 5** Signs for science project displays are cut from pieces of poster board that measure 1 yard on each side. Each sign is  $\frac{1}{3}$ -yard long and  $\frac{1}{9}$ -yard wide. How many signs can be cut from 1 piece of poster board? What is the area of each sign?

**Show your work.**

**Students may model  $\frac{1}{3} \times \frac{1}{9}$  with an area model, an equation, or both.**

**Solution:** 27 signs;  $\frac{1}{27}$  square yard

Lesson 14 Name: \_\_\_\_\_

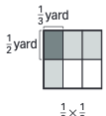

**Multiply Fractions Greater than One**

**Study the example problem showing multiplying fractions greater than 1. Then solve problems 1–6.**

**Example**

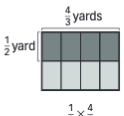

What is the area of a rectangle that is  $\frac{1}{2}$ -yard wide and  $\frac{4}{3}$ -yards long?

This area model shows  $\frac{1}{2} \text{ yard} \times \frac{1}{3} \text{ yard} = \frac{1}{6}$  square yard.

$\frac{1}{2} \times \frac{1}{3}$

This model uses the same  $\frac{1}{6}$ -square yard parts to show an area that is  $\frac{1}{2}$  yard  $\times$   $\frac{4}{3}$  yards.

$\frac{1}{2} \times \frac{4}{3}$

Four  $\frac{1}{6}$ -square yard parts are shaded dark gray.

$\frac{1}{2} \text{ yard} \times \frac{4}{3} \text{ yards} = \frac{4}{6}$  square yard

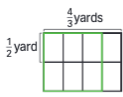

**B 1** How many  $\frac{1}{2}$ -yard lengths are in 1 yard? 2

**B 2** How many  $\frac{1}{3}$ -yard lengths are in 1 yard? 3

**M 3** Draw a line around the part of the model from the example problem that represents 1 square yard.

Does  $\frac{4}{6}$  square yard cover more or less area than 1 square yard? Explain.

**Less; Possible explanation: 1 square yard covers 6 of the  $\frac{1}{6}$ -square yard parts, while  $\frac{4}{6}$  only covers 4 of the  $\frac{1}{6}$ -square yard parts and  $4 < 6$ .**

**Solve.**

**M 4** Danah has a strawberry patch in her garden. Its border is  $\frac{4}{5}$ -meters wide and  $\frac{3}{2}$ -meters long. What is the area of Danah's strawberry patch?

**Show your work.**

Students may model  $\frac{4}{5} \times \frac{3}{2}$  with an area model, or an equation, or both.

**Solution:**  $\frac{12}{10}$  square meters

**M 5** Danah is planting a second strawberry patch and wants it to have an area of exactly 1 square meter. Which of the following could be the width and length of its borders? Circle the letter for all that apply.

**A**  $\frac{1}{2}$ -meter wide and  $\frac{3}{2}$ -meters long  
**B**  $\frac{2}{3}$ -meter wide and  $\frac{3}{2}$ -meters long  
**C**  $\frac{4}{5}$ -meter wide and  $\frac{5}{4}$ -meters long  
**D**  $\frac{2}{3}$ -meter wide and  $\frac{6}{4}$ -meters long

**C 6** Look at problem 5. If Danah wants her strawberry patch to be exactly 1 square meter, can the length of her strawberry patch be greater than 1 meter? Explain.

**Yes; Possible explanation: B, C, and D all have lengths greater than 1 meter and their areas are exactly 1 square meter.**

If I find the area of each different shape strawberry patch, I can figure out which options have an area of 1 square meter.
