SCOPE OF SERVICE
SCOPE OF SERVICES

Mobile device management (MDM) is typically a solution for deployment of applications and configurations and enterprise policies and certificates. MDM’s purpose is simplifying and enhancing the IT management of end user devices. This not only includes smartphones, but can extend to tablets, laptops, and even IoT (Internet of Things) devices. MDM is a core component of enterprise mobility management (EMM), which also includes mobile application management, identity and access management, and enterprise file sync and share.

MDM requires two components in a data center: The overall role of MDM is to increase device supportability, security, and enterprise functionality while maintaining some user flexibility.

- Server component – IT administrators configure and send out policies through a management console.
- Client component – Receives and implements the commands on end-user devices.

Shelby County Schools is seeking a Mobile Device Management (MDM) solution to manage Apple iOS and macOS devices on the network. The District currently utilizes Microsoft System Center Configuration Manager (SCCM) to manage Windows OS devices, part of our Microsoft Office Education 365 A5 Plan. However, as usage of Apple iOS and macOS devices expands beyond niche enterprise use cases (i.e. graphics, marketing, application development), the need for a formidable solution to manage such devices has become more important.

While price is an important consideration, quality, warranty support, and available services are included in the scoring criteria. Additionally, an established history in the education market and references will contribute to the selection of the solution.
