QUESTIONS AND ANSWERS

IFB 01292026DEM Reach in Freezers and Refrigerators

1. For the 3-section freezer, the specs call for a 208-volt unit. True is mentioned as an acceptable manufacturer but their 3-door freezer is a standard 120 volt. Would that voltage work or do we need to work with models that meet the 208 requirements?

Answer: Proceed with obtaining pricing for a 3-door freezer from the other approved brands. These replacement units must match the existing electrical connection, which is a 208v power source.

Thank you,
